

EFS TECHNOLOGY TRANSFER OPPORTUNITIES

THERAPEUTICS

- Antibody-drug conjugate for the treatment of venous thromboembolism
- Targeting HSC for treating hemoglobinopathies
- Tailored therapeutic B lineage cells to treat immunodeficiencies
- HDL as a therapy and companion diagnostic for acute GVHD and CRS

BIOTECHNOLOGIES

- Injectable solution for stem cells preservation
- Multiple Myeloma model from patient-derived bone marrow organoid
- Bone marrow organoid
- Method for the production of human brown and beige adipocytes

DIAGNOSTIC

- Central Thrombocytopenia diagnosis through young platelet detection
- Diagnostic test for platelet activation detection

DEVICES & EQUIPMENTS

- Device for homogenous and 96-well format DNA sample fragmentation through ultrasonic waves
- Devices for platelet release based on turbulent flow
